

Annual Safety and Training — Combined Report

Agent pipeline · 3 source documents · generated 2026-09-15

Method

Each source PDF was converted to Markdown (text and tables extracted; figures noted by caption, never OCR'd), summarised by a local model, and its tables parsed back into a dataset. Numbers that appear only inside a figure are absent from this report by design.

Provenance

- Pipeline: agent (control loop, self-terminating)

Documents

site a workshop report

Source: `site\_a\_workshop\_report.pdf` · summarised by `llama3.1:8b`

The site A metal workshop annual safety and training report covers the four quarters of the reporting year and summarises recorded incidents and training hours. The report shows a total of 17 incidents, with the majority occurring in the first quarter, and a significant increase in training hours in the third quarter due to the introduction of a revised hot-work induction. The annual equipment inspection recorded two non-conformities, both related to extraction airflow in bays three and four.

site b hydraulics report

Source: `site\_b\_hydraulics\_report.pdf` · summarised by `llama3.1:8b`

The document is a safety and training report for the hydraulics laboratory at Site B, which is used for pressure-system training. The report shows a reduction in incidents from 9 in the first quarter to 4 in the third and fourth quarters, although the replacement of an older test rig in the second quarter is cited as a possible explanation. The report also notes that training hours remained relatively stable throughout the year, ranging from 155 to 180 hours per quarter.

site c electrical report

Source: `site\_c\_electrical\_report.pdf` · summarised by `llama3.1:8b`

The Site C Electrical Report documents the annual safety and training performance of the Site C Electrical Training Centre. The centre recorded a low incident count throughout the year, with only one incident in the third quarter involving a hand tool rather than an electrical hazard. The training hours dipped in the fourth quarter due to the examination period, but no non-conformities were recorded at the annual inspection.

Extracted data

12 rows were parsed from tables across 3 documents. The table and the chart are in the companion file `report.html`.
