

Site C — Electrical Training Centre: Annual Safety and Training Report

Site C delivers electrical installation training, including circuit diagram interpretation, testing and fault finding. Learners work on de-energised training boards for the first two terms.

Recorded figures

Quarter	Incidents	Training hours
Q1	2	180
Q2	1	185
Q3	1	190
Q4	0	130

Commentary

The centre records a low incident count throughout the year, consistent with the de-energised training model. The single third-quarter incident involved a hand tool rather than an electrical hazard. Training hours dipped in the fourth quarter because of the examination period, not because of reduced provision.

Inspection outcome

No non-conformities were recorded at the annual inspection. The centre recommends that the fourth-quarter dip in training hours be smoothed in the next timetable revision.
